Flashing side marker lamps – UN ECE Regulation No 48

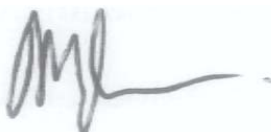

From the 18th November 2017, all new lighting installation approvals issued for vehicles in support of a Bodybuilders European Whole Vehicle Type Approval (ECWVTA) must comply with the 06 series of amendments of Regulation No 48. This mandates the installation of 3 x flashing side marker lamps on both sides of vehicles over 9m in length, equally spaced along the whole vehicle.

If a Bodybuilder is in the process of adding NTG type approval to their existing approvals, then this could be construed as a new type and hence, this installation will be required. Any Bodybuilder who has an installation approval to the 05 series, we understand, will be able to continue as normal. As far as we aware, the change does not affect holders of a National Small series Approval (NSSTA) or vehicles presented for Individual Vehicle Approval (IVA) at this stage although this could change at some point in the future.

We strongly advise that you ask any Bodybuilder you have dealings with and holding any form of ECWVTA or NSSTA to contact their approval authority for clarification.

From build period 180401, vehicles supplied with side marker lamps will comply with the requirements of the 06 series of amendments. In the meantime, if you have any questions from Bodybuilders concerning the fitment and operation of these additional lamps on NTG product, please ask them to contact this department.

If you have any questions concerning this procedure, then please contact the Sales Engineering Department.
